

The low back W1i Tillett seat is supplied either as a single skin, or with a self supporting floor mountable back frame. If bought as a single skin shell it must have brackets made in order to fit it to various vehicles. These seats can also be ordered with a carbon or GRP front surface and with or without covering. The covering options are either, with the tough fabric used on our kart racing seats, or with a Dinamica suede panel set. Three seat belt harness holes are included as standard. When ordered with the back frame you can select a "side mount" or "bottom mount" version. When side mounts are selected the PTBi, PTBO, TBFI, STBi, STBO, and Elise brackets EBR, EBR 17+, EBS, EBP can be used.

**W1i-44 Carbon GRP**  
with back frame

Seat above and below is shown with the optional back frame.

**W1i-44 GRP**  
shell only

This picture shows a GRP shell without the back frame. When used without a back frame, at least four mount points are advised in the areas shown.
