

The W2i Tillett car seat is the wide version of the W1i and is designed for drivers over 100 kg. The W2i is either supplied as a single skin shell, or with a moulded composite back frame which makes the seat self supporting. If the single skin type is used, it must have brackets made in order to fit it to various vehicles. These seats are available in gloss GRP or with a carbon front surface. The W2i has a Dinamica suede panel set option where the trim and padding can be customised. Seat belt harness holes are fitted as standard.

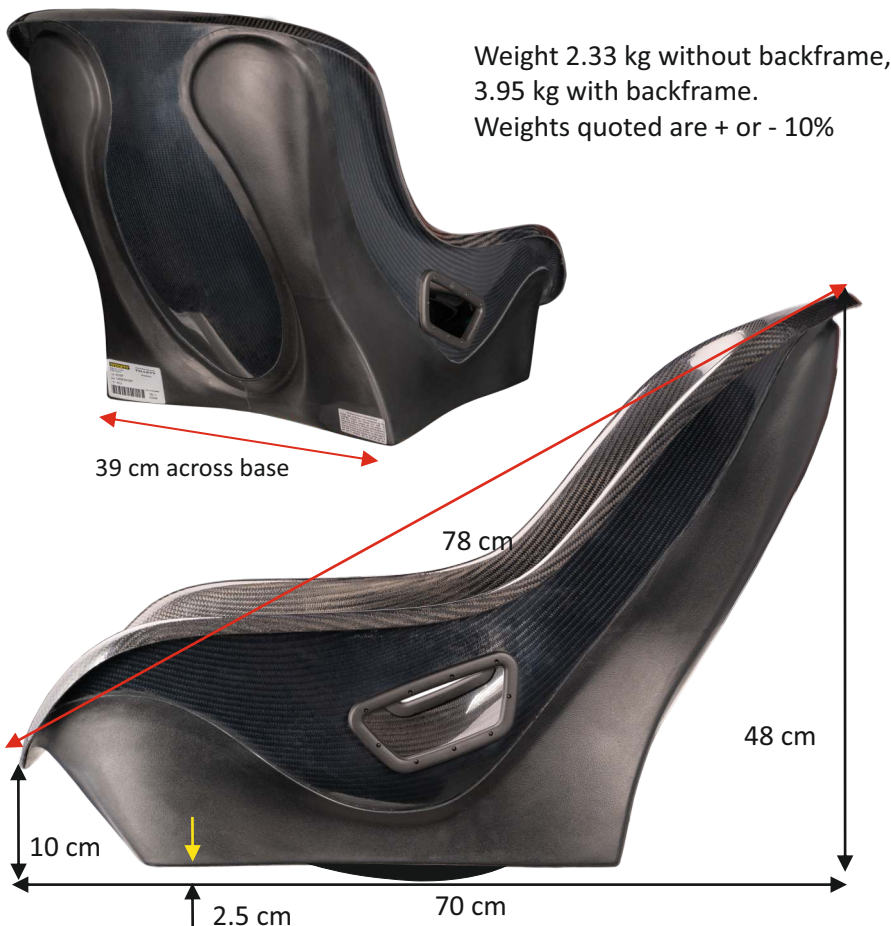

W2i carbon GRP with back frame.

W2i carbon GRP

The picture above shows the W2i carbon GRP shell without the back frame. When used without a back frame, at least four mount points are advised in the areas shown. It is advisable to use our TK1 bolt kit, or the low profile TLPK1 stainless fitting kit. Aluminum plates between the upper mount points are also advised and the brackets should be parallel to the composite profile at the bolting points.

Weight 2.33 kg without backframe,
3.95 kg with backframe.
Weights quoted are + or - 10%

Holes spacings for the optional
W2 back frame
