

The W4 is a very reclined seat which is designed for low race vehicles such as formula cars. The seat is extremely narrow yet can still accommodate a wide variety of driver sizes up to 130 kg. The W4 has a black gloss GRP front surface and can be ordered with a floor mountable back frame which allows the seat to be self supporting. This allows the seat to be mounted to an adjustment runner system. However, seat runners are not recommended for competition purposes. The W4 can also be ordered with a Dinamica suede panel set. Seat belt harness holes are included and can be altered to suit your requirements.
